## **Trucknology Generation (TG) at IDEX 2013: Reliability made by Rheinmetall MAN Military Vehicles**

No logistics, no tactics! In order to keep frontline troops supplied in modern asymmetric conflicts, logistics units need reliable transport vehicles.

The premium vehicles of the MAN Trucknology Generation (TG) are among the most advanced commercial vehicles anywhere, setting the benchmark for reliability and innovation.

With their highly versatile axle variants, drive formulae (4x2 to 8x8) and powerful engines, TG vehicles open up a new world of possibilities. TG cabs are available in different sizes and configurations, suitable for every requirement and transport mission. Dynamic, reliable and efficient, their environmentally friendly MAN common rail engines are the right answer for military operations worldwide. Combined with the MAN TipMatic gearbox or smooth-shifting manual gearboxes they provide powerful propulsion. RMMV's TG trucks can be configured to operate in a wide variety of climate zones and terrains.

In order to meet the demanding requirements of military customers, RMMV has put great effort into making the integration of added equipment possible across the board.

On show at IDEX 2013 are the TGS-Mil 8x8 and the TGM-Mil 4x4.

The TGM-Mil 4 x 4 is a versatile medium-range all-wheel-drive truck, custom-designed to handle the tough requirements of military logistics. With a gross weight of 18 tonnes, it is powered by a MAN D0836 common rail diesel engine, delivering 240 kW (330 hp) and 1.250 Nm. This all-rounder combines the reliability of tested, mass-produced components with state-of-the-art innovative engineering specifically for the military, making it one of the most economical military vehicles in its class.

The militarized TGS is a heavy-duty truck with a gross weight of 41 tonnes. Its MAN D2676 common rail diesel engine performs up to 397 kW (540 hp) and 2,500 Nm. The TGS-Mil is based on MAN's Trucknology Generation, heavily reengineered to meet the needs of the military.

RMMV's TGM-Mil and TGS-Mil trucks are among the most cost-effective and versatile logistic vehicles in their classes. Their outstanding reliability explains their success with the German Bundeswehr and the armed forces of many other nations worldwide.
